

Urge Your Senators to Vote “No” to the President’s Cap-and-Trade Bill that will increase your cost of living and not change the climate

The Kerry-Lieberman Cap and Trade Bill will drive the USA away from cheap efficient energy and permanently increase your cost of electricity, transportation fuel, and food.

- The bill is based on the false premise that man-made CO₂ is a major cause of climate change. Real, empirical evidence indicates it is not. But even if CO₂ was a major factor, using the Intergovernmental Panel on Climate Change's own formula and numbers, the bill would only reduce Earth's temperature by one tenth of one degree within the next 90 years!
- Wall Street, the Administration, green industries, environmental extremists, academia, and the media will love Kerry-Lieberman; you will not because you will pay for the costs.
- Passing Kerry-Lieberman will not stop the oil spill. Cost of the spill will be

paid for by BP. Don't let the President get the bill passed by riding the unrelated oil spill tragedy which will cost you money.

- The Obama Administration is touting energy independence by passing Cap and Trade. You cannot run your cars, planes, businesses, and homes on Wall Street's profits. Wind and Solar provide less than one percent of our energy and that will not increase by a meaningful amount for decades. Fossil fuels provide 83% of our energy. Our economy will never recover if Obama's attack on this industry succeeds.

Cap and Trade proponents are buying support from industries on Wall Street with various corporate giveaways as he did with the very expensive Health Care Bill. Do not let this happen again with the Kerry-Lieberman Cap and Trade Bill.

CO₂ IS GREEN

To understand CO₂'s negligible impact on climate change, go to CO2isgreen.org.
