

January 27, 2016

Dear Senator,

The undersigned write to ask for your support of provisions Secs. 1015, 1016, and 1017 included in S. 2012, the *Energy Policy Modernization Act of 2015*, that would not only repeal a requirement regarding the reduction and eventual elimination of fossil fuel-generated energy consumption in new and renovated federal buildings, but strengthen broader energy efficiency targets and other direction to federal agencies.

The provisions in Secs. 1015, 1016, and 1017 would save taxpayers money by enhancing the energy efficiency of federal buildings. A part of Section 433 of the Energy Independence and Security Act of 2007 was intended to reduce fossil fuel-generated energy use in new and renovated federal buildings, with a 100 percent reduction required by the year 2030. However, due to the complexities of the law, the federal government cannot find a long-term path to compliance. Thus, there are continuing concerns that it could discourage comprehensive energy efficiency renovations, stifle innovations and result in increased energy costs for the federal government.

The provisions included in S. 2012 would not only repeal this requirement, but strengthen several existing federal energy management provisions to ensure large energy savings in the coming years. These fuel-neutral provisions would:

- Extend overall energy use intensity reduction targets of 2.5% a year for federal buildings out to 2025 to continue the focus on reducing building energy waste;
- Ensure that significant alterations and additions to federal buildings, such as new roofs, meet minimum efficiency levels;
- Use commissioning of large federal buildings to ensure that their energy systems are operating as

- designed – this has been shown to achieve significant energy savings at modest cost; and
- Encourage use of energy management systems and implementation of cost-effective capital measures in large federal buildings, in part by using private financing and expertise, such as in Energy Savings Performance Contracts and Utility Energy Service Contracts.

These provisions would give federal building energy managers flexibility to achieve reductions in federal energy consumption in a cost-effective manner, encourage the adoption of energy efficient technologies and practices, and spur the retrofits of federal buildings.

We urge you to retain these provisions that will ensure that the federal government demonstrates best practices in reducing wasted energy and wasted taxpayer money.

Sincerely,
