Majority Leader of the Senate
The Honorable Chuck Schumer
Minority Leader of the Senate
United States Senate
Washington, DC 20510

RE: Group Letter of Support for Clean Energy and Sustainability Accelerator (National Climate Bank)

Dear Leader McConnell and Minority Leader Schumer:

Last week, U.S. Treasury Sec. Steve Mnuchin asked Congress to pass additional economic relief, especially for industries that have seen significant job losses due to the COVID-19 pandemic. One of those is the clean power and transportation sector, which has already lost 600,000 good-paying jobs that support middle class families.

To get these workers and their families across the country back on their feet, and create millions more new clean energy jobs, we urge you to provide $20 billion for a nonprofit Clean Energy and Sustainability Accelerator. In June, the House included the nonprofit accelerator and funding when it passed the Moving Forward Act.

Throughout our nation’s history during times of immense challenge, we have taken bold action to build a better future for our country. Voters expect Congress to continue this tradition. In national polls, 4 out of 5 voters want Congress to invest in new jobs to build clean energy infrastructure, like wind turbines, solar panels, power lines, and electric vehicle charging. And 69 percent say the U.S. government should deposit as much as $35B into a nonprofit accelerator to achieve that goal.

The opportunity to build the infrastructure to generate, move, store and use clean and efficient energy is nearly boundless. Trillions of dollars of investment is needed to build clean energy infrastructure that will put millions back to work, strengthen communities, reduce pollution, improve public health, lower energy costs, and reduce greenhouse gas emissions.

The Clean Energy and Sustainability Accelerator—as envisioned by Sens. Markey and Van Hollen (S.2057) and Rep. Debbie Dingell (H.R.5416) in the National Climate Bank Act of 2019—is a common sense vehicle for this investment because it will pair each public dollar with multiple private ones to build a range of clean energy projects. These projects could include renewable power, building efficiency, grid infrastructure, industrial decarbonization, clean transportation, reforestation, and climate-resilient infrastructure. Every public dollar invested will be repaid by the Accelerator, which means dollars can be recycled to drive even more private investment in the future.

The nonprofit accelerator will use the green bank model that has been proven at the state and local level in the U.S. There are already successful green banks in states like Michigan, Florida, Connecticut and Hawaii, and new ones in place in Colorado, Ohio, and Nevada. These green banks have driven over $5 billion of investment into clean energy; for each public dollar invested, $2.60 of private investment has followed.
To strengthen communities in every corner of America, the nonprofit accelerator will fund the expansion of the existing green banks and help form new regional, state or local green banks across the U.S. This will build a network of local institutions designed expressly to meet the employment, energy, development and environmental needs of that community.

No community will be overlooked: At least 20 percent of the nonprofit accelerator’s investment must go to frontline, low-income and climate-impacted communities. Existing green banks have already proven the possible, delivering clean energy and health benefits to communities that have historically been left behind. This ensures good clean energy jobs are formed throughout the U.S., especially in areas that need them the most.

Immediate economic relief is essential in this crisis, but so too is providing a livelihood for the millions of American families and households out of work. Voters across parties want Congress to invest in clean energy job creation to put Americans back to work. Including and funding Clean Energy and Sustainability Accelerator will achieve this.

Sincerely,
